Connectors

Connector Overview

Basic Information about Connectors

What are Connectors

Connectors hook up Onyx to your data sources so that answers are grounded in your organization's knowledge.

Connectors help you

Choose Sources so you can include only the data you want indexed.

Configure Access so Onyx can securely access data with your permission.

Set Up Fetching options to keep Onyx's answers up to date.

Monitoring Connectors

Open the **Connectors Dashboard** (accessible from the profile icon on the top right) At the top there is a **Status** page which shows which sources have been indexed and the status of the indexing job.

Indexing

Status

Connector Settings

Slack

Web

Github

Google Drive

Connector	Status	Last Indexed	Docs Indexed	Re-Index
Github PRs	Success	2 day(s) ago	46 documents	<button>Index</button>
Web [https://platform.openai.com/docs/api-reference]	Success	2 day(s) ago	1066 documents	<button>Index</button>
Web [https://docs.github.com/en/actions]	In Progress...	-	-	<button>Index</button>

Missing a Connector?

Is there a Connector that would be useful to you? Let us know via a [GitHub Issues](#) page. (Please check if the connector you're interested in is already mentioned).

Don't forget to thumbs up the issues requesting the connectors that you would like to see built next!

Contributing a Connector

As Onyx is opensource, one of the best features is that anyone can add to it! We encourage people who need new connectors to contribute it back to the Onyx repo for other people to benefit as well.

Refer to this [README guide](#) for how to add a new Connector.
